1️⃣ Problem Statement

Our project aims to analyze the factors that affect students' academic performance.
We want to understand how variables such as:

- study hours
- sleep hours
- attendance
- extracurricular activities

influence students' final exam score.

2️⃣ KPIs

- Average Student Score
- Average Study Hours
- Average Sleep Hours
- Attendance Rate
- Pass Rate
- Performance by Gender
- Performance by Parental Education
- Internet Access Impact
- Extracurricular Activities Impact

3️⃣ Analysis Questions

1. Does studying more hours lead to higher scores?
2. Does better sleep affect student performance positively?
3. How does attendance affect exam results?
4. Does participating in extracurricular activities improve grades?
5. Does having internet access at home affect student performance?
6. Is there a difference in performance between male and female students?
7. How does parental education level influence student scores?
8. Are students who study more also attending more regularly? (correlation between study time & attendance)
9. Which factor has the strongest impact on final exam scores?
10. Are there patterns in students' grades based on multiple factors combined (like study hours + sleep + attendance)?
